

METALOGIX REPLICATOR

Synchronize. Replicate. Collaborate.

The Most Powerful Way To Sync Multiple SharePoint Farms

Sync Critical Operations Centers

Collaboration is mission-critical, but keeping SharePoint in sync across increasingly complex and rapidly growing operational environments isn't easy. Replicator is built to handle collaboration platforms in extraordinary conditions. Synchronize SharePoint farms wherever they're located – even over challenged or low bandwidth networks. Benefit from the confidence of knowing that SharePoint is always in sync even during complex migrations, mergers, or anytime you need to share content outside your network.

High Availability for SharePoint

For more than a decade, Metalogix Tools and engineers have been trusted by thousands of clients to ensure that their SharePoint content is always operational and available. During this time we've offered several industry firsts, including Metalogix Replicator – the first tool to replicate content over limited bandwidth and ensure the continuous availability of SharePoint environments. Replicator provides a safety net for organizations that demand mission-critical reliability by ensuring uptime and

minimizing data loss during power, system or network failures, and planned outages.

Live Bi-directional Replication

Give users access to up-to-date and in-sync content wherever they are and whenever they need it. Sync content as soon as changes happen or on a regular schedule. Synchronize content between large multiple Geo-dispersed farms. Replicator works through firewalls so you can easily extend collaboration to external business partners and customers, without compromising security.

Replicate Between Any Version

Metalogix Replicator was the first purpose-built synchronization tool for SharePoint and is supported by our world-class Client Support and leverages our partnerships with key SharePoint vendors and Microsoft. Our years of experience with SharePoint, allows Replicator to synchronize content between any version or edition of SharePoint 2007, SharePoint 2010 and SharePoint 2013, ensuring your critical content is available during migrations, mergers or acquisitions.

Replicate to and from the Cloud

Replicate all or some of your SharePoint content to Azure, Amazon or other cloud providers. Replicator's fast synchronization and low bandwidth requirements make it the ideal SharePoint replication solution to extend content to the cloud.

Tech Specs

Supported SharePoint Versions

- Installs into SharePoint Central Administration
- Native Microsoft .NET Application
- Microsoft SharePoint Server 2013
- Microsoft SharePoint Foundation 2013
- Microsoft SharePoint Server 2010
- Microsoft SharePoint Foundation 2010
- Windows SharePoint Services 3.0
- Microsoft Office SharePoint Server 2007

Supported Operating System

- Windows Server 2012 R2
- Windows Server 2012
- Windows Server 2008 R2
- Windows Server 2008
- Windows Server 2003 SP1

Control What Content is Replicated

Replicator fits right in with your security, compliance, and permissions management policies. Easily configure Replicator to grant users access to all or just certain content. Replicator delivers the right content, including customized workflows, such as Nintex, to different divisions and locations. Using a centralized, master content database you decide what to share across remote farms, with granularity from entire web applications to specific list item.

Prioritize Sync Based on Rules

Use Replicator's rules feature to rank what replicates first, because your financial data is more important than company party pictures. Classify and prioritize content based on important site collections, list items or metadata such as document type, file size, or file name. Ensure the most important content is available and distributed on time.

Handle Conflicts

Resolve document version conflicts according to rules you define, either manually or automatically. For example, if the date on an inbound item is older than the date on an existing

item, specify whether to skip it, replace it, or create a report for further review. Email team members about conflicts for faster resolution.

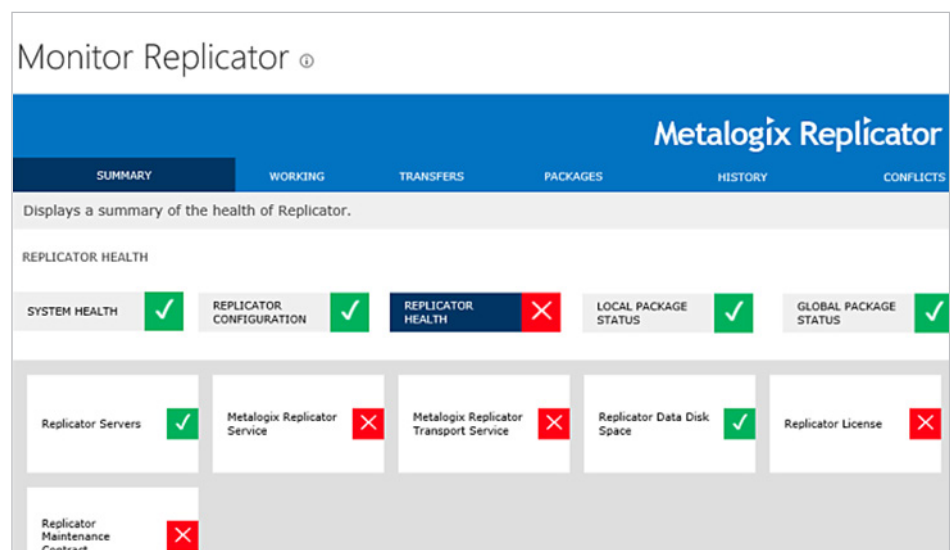

Visually Manage Your SharePoint Replication

Simplify the management of replication tasks and activities with an intuitive interface. View your entire SharePoint layout to verify and monitor the status of all your SharePoint replication activity over multiple servers and across distant farms. Drill down to see detailed traffic information and view replication trends

by day, week, or month. Confidently know where your documents are in your SharePoint landscape.

Easy to Install and Try

Replicator is designed with ease in mind and installs in minutes. It connects directly to SharePoint in minutes without the need to manage separate software or purchase additional hardware. Most importantly, it's easy to learn and use. Download the Replicator Free Trial or take it for a Test Dive and see for yourself how quickly you can be up and replicating.

About Metalogix

Metalogix provides industry-recognized management tools for mission-critical collaboration platforms. These tools are engineered and supported by experts committed to the rapidly evolving deployment and operational success of our clients.

Metalogix' world-class tools and client service have proven to be the most effective way to manage increasingly complex, and exponen-

tially growing metadata and content across collaboration platforms.

For over a decade, Metalogix has developed the industry's best and most trusted management tools for SharePoint, Exchange, and Office 365, backed by our globally acknowledged live 24x7 support. Over 14,000 clients rely on Metalogix Tools every minute of every day to monitor, migrate, store, synchronize, archive, secure, and backup their collaboration platforms.

Metalogix is a Microsoft Gold Partner, an EMC Select Partner, and a GSA provider. Our Client Service division of certified specialists is the winner of the prestigious NorthFace ScoreBoard Award for World Class Excellence in Customer Service.
